

Environmental Care

Application Guide

A healthy environment is critical for maintaining the well-being of livestock and poultry operations. Efforts to improve animal health pays dividends when it comes to production efficiency. When building ideal conditions for animals to thrive, moisture control plays a key role in reducing the threats of bacterial and mold growth.

Environmental Challenges

Mitigating the risk of bacterial infections and foot pad lesions reduces risk of dermatitis and ammonia, as well as propagation of Salmonella and E. coli. Overall animal health improvement reduces unnecessary stresses and directly impacts the productivity of your animals. Profile Environmental Care product is a sustainable way to overcome environmental challenges, alleviate moisture and increase the performance and health of your animals:

Immunology

Profile Environmental Care product supports immunology and reduces the risk of scours, bacterial foot infections, dermatitis and more.

Stresses

Unfavorable conditions in bedding and feeding areas lead to unnecessary stressors, creating inefficiencies in performance and production. Environmental Care product acts to improve conditions in bedding and feeding areas to reduce stress and improve performance.

Slippage

Though rare, slippage injury to animals or the people tasked with their care can be one of the costliest accidents.

Birthing and Weaning Facilities

This period of an animal's life is most vulnerable to bacterial infection and hypothermic conditions. Profile Environmental Care product seeks to keep them healthy, clean and free from bacteria.

Conditions Prevented Or Treated:

Dermatitis
Salmonella
E. coli
Ammonia Odor
Urea Mitigation
Bacterial Foot Infections

Common Areas For Application

Feeding Units
Bedding
Concentrated Traffic Areas
Watering Units
Holding Pens
Nursery/Stalls

Improving the Overall Environment of Your Animals Protects Against

Bovine	Swine	Poultry	Equine	Small Animal
- Bacterial Scours - Salmonella E. coli - Pneumonia	- Greasy Pig Disease - Staphylococcus hyicus - Joint Ill - Heat Stress due to Humidity	- Dermatitis - Salmonella E. coli - Foot Pad Lesions - Pneumonia	- White Line Disease - Thrush - Softened Hoofs - Abscesses - Shoe Loss	- Dermatitis - Ammonia Odor - Abscesses

Directions for Use & Applications Rates

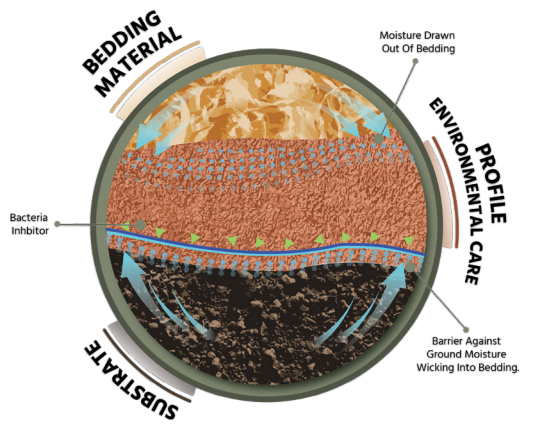

For New Bedding Areas

Apply Environmental Care evenly to the area at a rate of one 50-lb. bag per 600 square feet prior to deployment of new bedding material. In known areas of extreme moisture, apply one 50-lb. bag per 300 square feet. For best results, use a drop or rotary spreader.

Spot-Treatment of Problem Areas

Saturated areas commonly found around watering units or high-traffic pathways may require spot treatments. Apply at a rate of one 50-lb. bag per 144 square feet to handle zones of frequent or extreme saturation. Additional can be applied as needed.

Existing Poultry and Livestock Bedding

Apply Environmental Care evenly to the area at a rate of one 50-lb. bag per 600 square feet to existing bedding. In conditions where excessive moisture is present, one 50-lb. bag per 300 square feet is recommended. For best results, use a drop or rotary spreader.

Profile Environmental Care Product

Profile Environmental Care product helps you manage the moisture around your livestock and poultry operations. Driven by our vast experience and expertise in soil and animal health, our Environmental Care product offers an added component specifically designed for muddy, low-lying locations, or wherever excess water is present to improve footing, reduce slippage hazards and protect against unfavorable conditions due to high moisture. Our Environmental Care product provides superior moisture control in a durable particle that can be repeatedly wetted and dried without losing its effectiveness, reducing airborne moisture proven pathogens.

Profile Environmental Care product naturally acts to support immunology, reduce the risk of bacterial growth and threat of physical injury, resulting in increased performance, productivity and overall health of animals.
