

Environmental Care

A healthy environment is critical for maintaining the well-being of livestock and poultry operations. Efforts to improve animal health pay dividends when it comes to production efficiency. When building and providing ideal conditions for animals to thrive, moisture control plays a key role in reducing the threats of bacterial and mold growth.

Environmental Challenges

Mitigating the risk of bacterial infections and foot pad lesions reduces risk of dermatitis and ammonia, as well as propagation of Salmonella and E. coli. Overall animal health improvement reduces unnecessary stresses and directly impacts the productivity of your animals. Profile Environmental Care product is a sustainable way to overcome environmental challenges, alleviate moisture and increase the performance and health of your animals.

What is Profile Environmental Care?

Our Profile Environmental Care product helps you manage the moisture around your livestock and poultry operations. Based on our vast experience and expertise in soil and animal health, our technology is designed for muddy, low-lying locations, or wherever excess water is present to improve footing, reduce slippage hazards and protect against unfavorable conditions due to high moisture. It provides superior moisture control in a durable particle that can be repeatedly wetted and dried without losing its effectiveness.

Profile Environmental Care product naturally acts to support immunology, reduce the risk of bacterial growth and threat of physical injury, resulting in increased performance, productivity and overall health of animals. As a result, it absorbs more moisture over time than other products due to its ability to continuously remove moisture over multiple instances of wetting.

BENEFITS:

- Supports Animal Health
- Improved Production Performance
- Moisture Control
- Non-degrading Structure
- Mold Inhibitor
- All Natural and Environmentally Friendly

APPLICATION AREAS:

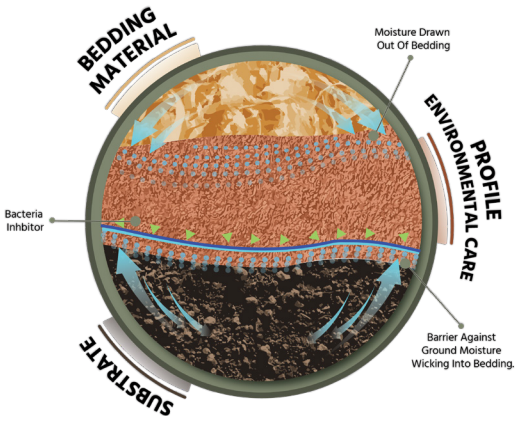

- Feeding Units
- Concentrated Traffic Areas
- Watering Units
- Holding Pens
- Nursery
- Bedding/Stalls

About Profile Products

Profile Products is a leading developer and manufacturer of highly engineered specialty agriscience materials that promote environmental sustainability while delivering superior performance for animal health, horticulture, erosion control, sports turf and other specialty applications.

How Environmental Care Works

The Profile Environmental Care product is placed on bare substrate, concentrating in high-traffic areas.

The porous ceramic nature of the material forms a barrier against ground moisture from the substrate making Profile Environmental Care product an excellent choice as a foundation for animal bedding or around feeding troughs. In addition, the material will draw excess moisture out of the bedding above, keeping animals cleaner and healthier.

The material also inhibits many common bacteria found in animal gathering areas. As the Environmental Care product material is compressed into the substrate by movement and pressure such as laying or walking, this inhibition action can take full effect.

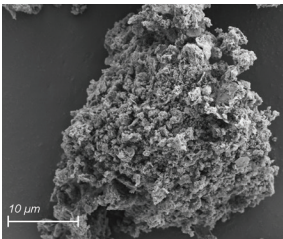

Environmental Care product provides superior performance when it comes to moisture control over an extended period of time. What sets it apart from other products is its ability to maintain long-lasting efficacy through generations of absorption cycles.

Environmental Care Product Helps Protect Against

Bovine	Swine	Poultry	Equine	Small Animal
• Bacterial Scours • Salmonella • E. coli • Pneumonia	• Greasy Pig Disease • Staphylococcus hyicus • Joint Ill • Heat Stress due to Humidity	• Dermatitis • Salmonella • E. coli • Foot Pad Lesions • Pneumonia	• White Line Disease • Thrush • Softened Hoofs • Abscesses • Shoe Loss	• Dermatitis • Ammonia Odor • Abscesses

Porous Ceramic Technology (PCT)

Profile’s Porous Ceramic Technology utilizes a proprietary process to transform montmorillonite clay into durable ceramic particles. The resulting ceramic does not degrade like traditional clay and maintains greater surface area and porosity. It is a technology that provides direct improvement to the environment in which your animals live. Environmental Care product captures and releases moisture in a natural, controlled cycle.

The Proof is in Performance

At Profile, we believe our customers deserve to know how a product adds value to their business. From the largest integrator to the smallest farm, we have a trial program that will allow you to assess the value of Environmental Care in your operation.
