

PowerGuard[®]

Feed Additive

Every livestock operation faces constant environmental and biological factors. Nutritionists are in a constant battle to overcome challenges, and many nutritionists have found that clay feed additives can be effective.

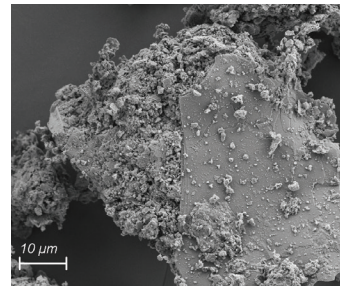

Supports Formulations for:

- Poultry Operations
- Swine Operations
- Bovine Operations

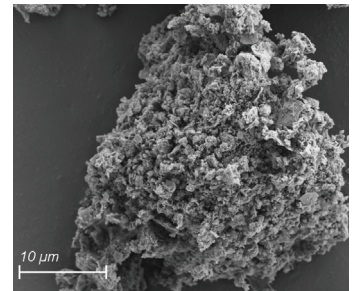

Micronized Porous Ceramic Technology (MPCT)

Typical
Clay Binder

Profile's
Micronized Porous Ceramic
Technology™

Profile is a leader in clay and ceramic technologies for a wide variety of sensitive environments. We know that not all clays are created equal and not all processes result in an optimal feed additive product. Profile's Micronized Porous Ceramic Technology (MPCT) utilizes a unique deposit of montmorillonite that is heat treated under exacting conditions in order to transform it into durable ceramic particles that retain their porosity under any condition. The particles are then fine-milled to a specific size that allows for greater surface area and superior dispersion throughout feed formulations. The result is a cost-effective and high performing feed additives that mitigate a broad range of challenges or provide carrier and extender functionality.

The POWER of Protection

Increased porosity and greater surface area ensures unmatched performance.

The POWER of Efficiency

With superior performance, PowerGuard can be used at a lower inclusion rate than other clay additives.

The POWER of Profits

We know maximized production and performance can be traced back to the smallest improvement – the smallest particle. PowerGuard supports your operation's bottom line.

About Profile Products®

Based in Buffalo Grove, Illinois, Profile Products is a leading developer and manufacturer of highly engineered specialty agriscience materials that promote environmental sustainability while delivering superior performance for animal health, horticulture, erosion control, sports turf and other specialty applications.

Nutritional & Environmental Challenges

Our customers face nutritional and environmental challenges everyday. We are committed to partnering with you to resolve those challenges. From efficiency at the feed mill to the performance of the animals, we offer solutions that make your operation more sustainable and more profitable.

The Proof is in Performance

At Profile, we believe that our customers deserve to know how a product adds value to their business. From the largest integrator to the smallest farm, we have a trial program that will allow you to assess the value of PowerGuard in your operation. To learn more about how PowerGuard or any other Profile technology can help you become more sustainable or more profitable, please contact us today.
